Q3 2026 Financial Summary

This report summarizes quarterly performance across all operating regions and functions. Overall revenue grew seven percent quarter over quarter, extending a streak of five consecutive quarters of sequential growth. Profitability improved modestly as gross margin expanded by sixty basis points, driven by a favorable shift in product mix toward higher-margin subscription revenue. Management remains confident in the underlying demand environment despite ongoing macroeconomic uncertainty in several key markets.

Revenue growth this quarter was driven primarily by three factors: continued expansion of cloud subscription contracts among enterprise customers, a successful mid-quarter price adjustment on legacy support plans, and stronger than expected renewal rates across the installed customer base. New logo acquisition also contributed meaningfully, with the sales organization closing eighteen percent more net-new accounts than the prior quarter. Partner-sourced revenue grew as well, reflecting the continued build-out of the channel program launched last year.

Regionally, the Americas remained the largest contributor to absolute revenue, while APAC posted the fastest relative growth rate of any region this quarter. EMEA delivered steady, if unspectacular, performance, weighed down by currency headwinds and slower public-sector procurement cycles. A full regional breakdown, including revenue by market and year-over-year growth trends, is provided later in this report along with supporting commentary on the drivers behind each region's results.

On the cost side, total operating expenses grew more slowly than revenue, reflecting continued discipline around discretionary spend and headcount growth. Cloud infrastructure costs rose in line with usage growth but were partially offset by a renegotiated hosting agreement that takes effect next quarter. Facilities costs declined slightly following the consolidation of two regional office leases. Overall, the cost structure remains healthy relative to the growth trajectory of the business.

Looking ahead to Q4, management expects revenue growth to remain in a similar range, supported by a healthy renewal pipeline and a strong quarter-end bookings backlog. Key risks to the outlook include continued currency volatility affecting EMEA results, potential delays in large enterprise deal cycles, and competitive pricing pressure in the APAC market. The company plans to continue investing in product development and go-to-market capacity while maintaining its current pace of margin improvement.

Regional Revenue Breakdown

Revenue grew across all regions this quarter, though the pace and drivers of growth varied considerably by market. The table below shows the breakdown by region, and Figure 1 visualizes the same data as a bar chart. Americas posted the highest absolute revenue, while APAC saw the fastest growth rate of any region.

APAC revenue grew eight percent quarter over quarter to four point two million dollars, the fastest growth rate of any region. This growth was driven primarily by strong mobile subscriber additions in Southeast Asia and continued expansion of cloud service adoption among mid-market customers in Japan and South Korea. Favorable currency movements against the US dollar added a modest additional tailwind. Management expects APAC growth to remain elevated next quarter as the recently expanded local sales team ramps up productivity.

EMEA revenue grew five percent quarter over quarter to three point one million dollars. Growth was supported by several large enterprise contract renewals in Germany and the United Kingdom, though results were partially offset by regulatory headwinds in the financial services vertical and slower public-sector procurement across the region. Currency effects were a modest drag on reported revenue compared to the prior quarter, masking somewhat stronger underlying constant-currency growth.

Americas revenue grew six percent quarter over quarter to five point six million dollars, the largest absolute revenue of any region. Growth was driven by continued strong demand from North American enterprise customers, particularly in the financial services and healthcare verticals, partially offset by softer results in Latin America where several large deals slipped into next quarter due to extended procurement cycles at two major accounts.

Taken together, the regional results reflect a business that is growing broadly across markets, with APAC emerging as an increasingly important growth driver even as the Americas continues to anchor the majority of absolute revenue. EMEA's steadier growth profile continues to provide a stable, diversified base for the overall business.

Region	Revenue ($M)	Growth (%)
APAC	4.2	8%
EMEA	3.1	5%
Americas	5.6	6%

Headcount Overview

Total headcount increased this quarter, with most hiring concentrated in engineering and go-to-market functions in support of continued product investment and sales capacity expansion. The table below summarizes headcount by department along with the net change from the prior quarter. Commentary on the drivers behind each department's hiring activity follows.

Engineering headcount grew to one hundred forty-two, a net increase of twelve, the largest addition of any department this quarter. Most new hires joined the platform team to support the ongoing migration to the new infrastructure stack, with the remainder split between the mobile and data platform teams. Attrition remained low, and the team expects hiring to continue at a similar pace next quarter as several open senior roles are filled.

Sales headcount grew to fifty-eight, a net increase of three, primarily reflecting expansion of the APAC field sales team to support the region's accelerating growth. Two account executives and one sales engineer joined the Singapore office, while the Americas and EMEA sales teams remained roughly flat quarter over quarter as the focus there shifted toward improving productivity of the existing team rather than net new hiring.

Marketing headcount grew to twenty-four, a net increase of two, with both new hires joining the product marketing team to support upcoming launches. Demand generation and brand marketing headcount remained flat, reflecting a deliberate decision to prioritize agency spend over additional in-house hiring for campaign execution this quarter.

Operations headcount grew to thirty-one, a net increase of five, the largest relative increase of any department. Hiring was concentrated in customer success, where two new customer success managers and two support engineers joined to keep pace with the growing customer base, alongside one new hire on the finance operations team supporting quarter-end close processes.

Overall, headcount growth this quarter was deliberate and concentrated in functions directly tied to near-term growth priorities, namely engineering platform investment, APAC sales expansion, and customer success capacity to support the growing installed base.

Department	Headcount	Change
Engineering	142	+12
Sales	58	+3
Marketing	24	+2
Operations	31	+5
